

Total No. of Questions : 8]

[Total No. of Printed Pages : 1

Roll No

CE-503 (GS)

B.E. V Semester Examination, June 2020

Grading System (GS)

Fluid Mechanics-II

Time : Three Hours

Maximum Marks : 70

- Note:** i) Attempt any five questions.
ii) All questions carry equal marks.

1. Differentiate pipe flow and open channel flow.
2. What is turbulence? Discuss the wall turbulence and free turbulence with example.
3. What do you understand by critical flow? Also explain specific energy curve.
4. Show that at the critical state of flow. The specific energy in a rectangular channel is equal to 1.5 times the depth of flow. Will the depth be greater or less than $2/3$ specific energy for the trapezoidal channel?
5. What is magnus effects? Why is it known as magnus effects?
6. What is “Turbine”? Explain how it is work.
7. Give a classification of turbines, on the basis of various parameters.

OR

Explain the terms: Friction drag, air foil, terminal velocity of a body.

8. Write short notes on any three of the following:
 - i) Siphon
 - ii) Pelton wheel turbine
 - iii) Priming of a centrifugal pump
 - iv) Specific speed of a turbine
 - v) Cavitation
