B.E. VII Semester

Examination, December 2020

Choice Based Grading System (CBGS)

Air and Noise Pollution Control

Time : Three Hours

Maximum Marks : 70

Note: i) Attempt any five questions.

ii) All questions carry equal marks.

1. What is Air Quality Index (AQI). Discuss AQI categories and associated health impact of each. Explain traditional method of measurement of air quality.
2. Explain various source of Air Pollution. Briefly explain types of Air Pollution and Air Pollutants.
3.
 - a) Discuss the sources and harmful effects of NO_x on human health as well as plants.
 - b) Discuss the economic effects of air pollution in details.
4.
 - a) Explain the working of high volume sampler to monitor the particulate matter in ambient air.
 - b) Describe the difference between emission standards and ambient air standards. Also mention the values of these two types of standards for SO_x, NO_x, CO and particulate matter.

[2]

5.
 - a) Explain the difference between ambient air monitoring and stack monitoring. Describe in brief how stack monitoring for gases is done?
 - b) What do you mean by collection efficiency of particulate matter. Also explain a method for removal and collection of particulate matter from a cement industry.
6. In terms of Noise Pollution discuss following.
 - a) Unit and measurement
 - b) Noise from Construction
 - c) Noise from Transportation
 - d) Airport Noise
7. Discuss "combustion" process to dispose waste. Also discuss how incomplete combustion of waste increases air pollution.
8. Define the following:
 - i) Manmade sources of air pollution
 - ii) Air Volume sampler
 - iii) Cyclone separator
 - iv) Scrubbers
