B.E. VII Semester
Examination, December 2020
Grading System (GS)
Industrial Waste Treatment

Time : Three Hours

Maximum Marks : 70

- Note:** i) Attempt any five questions.
ii) All questions carry equal marks.

1. a) Explain the principle and method involved in “reverse osmosis”, process used for industrial waste treatment.
b) Define “Sewer Rental charges”. How it is decided?
2. a) Compare COD to BOD ratio of waste water and analyse its characteristics.
b) Draw the flow diagram for waste water treatment process of “Paper and Pulp Industry”.
3. Explain the various methods of volume and strength reduction adopted for Industrial waste.
4. a) What are the adverse effects of textiles effluents on receiving bodies?
b) The BOD_5 of waste water from a paper and pulp manufacturing unit is 3400 mg/litre. Determine its ultimate BOD.

[2]

5. State the water pollution control legislation and describe the salient features of them.
6. What is meant by Radioactive Waste? Describe the methods of disposal of radioactive waste.
7.
 - a) Enlist different low cost waste treatment processes and explain any one in detail.
 - b) Explain reuse and recycling concept in waste water management.
8. Write short notes on any four of the following:
 - a) Characteristic of Tannery waste
 - b) Electro-dialysis
 - c) Common effluent treatment plant
 - d) Water pollution control board
 - e) Volume reduction
 - f) Toxicity of waste
