Roll No

CS-502 (GS)
B.E. V Semester Examination, June 2020
Grading System (GS)
Operating System
Time : Three Hours

Maximum Marks : 70

Note: i) Attempt any five questions.
ii) All questions carry equal marks.

1. Describe how a file directory system can be organized into one-level, two-level and tree-structure directories.
2. What is a file? Briefly explain different directory structures. What kind of directory structure is used in UNIX?
3. How did evolution of operating system take place to reach today's operating system?
4. What is meant by operating system? Define the essential properties of the following types of operating system.
 - i) Batch
 - ii) Multitasking and multiprogramming
 - iii) Time-sharing
5. What do you mean by deadlock prevention? A computer has six tape drives with n processes competing for them. Each process needs two tape drives for which values of n the system is deadlock free.
6. Briefly explain the following:
 - i) System call and system boots
 - ii) Buffering and spooling
7. Compare the following CPU scheduling algorithms, highlighting the strengths and limitations of each algorithm.
 - i) FCFS
 - ii) SRTF

OR

What is RRAG and WFG used for deadlock detection?

8. Write short notes (any two)
 - i) Virus
 - ii) Allocation of frames
 - iii) Multiprogramming
 - iv) Paging
