CS-6003-CBGS

B.E. VI Semester

Examination, June 2020

Choice Based Grading System (CBGS) **Software Engineering and Project Managements**

Time : Three Hours

Maximum Marks : 70

- Note:** i) Attempt any five questions.
ii) All questions carry equal marks.

1. a) What is software development? How is it different from software engineering? Explain various principles of software engineering in detail.
b) Explain the following:
 - i) Spiral Model
 - ii) Waterfall Model
2. a) Discuss the relationship between process model, a process specification and a process for project.
b) What is the need of Requirement Analysis? Explain the role of different requirement elicitation techniques.
3. a) Explain CMM along with the level and activities with each level.
b) What are software metrics? Describe data structure metrics?
4. a) Discuss the relative advantages of formal and informal requirement specification.
b) How can you specify different constructions on the modelling elements in UML?

PTO

[2]

5.
 - a) Explain the various coupling and Cohesion methods used in software design?
 - b) Differentiate between structured analysis and object oriented analysis.
6.
 - a) How can you compute the cyclomatic complexity of a program? How is it useful in program testing?
 - b) Differentiate between black box and white box testing? Give their advantages and disadvantages.
7.
 - a) What is Reverse engineering? Discuss its need. Explain how reverse engineering is different from re-engineering.
 - b) What is meant by software configuration management? Why is software configuration management crucial to the success of large software development projects?
8. Write short note:
 - i) SQA
 - ii) Project scheduling
 - iii) Risk Assessment
 - iv) Re-Engineering
