EE-8004(2)-CBGS

B.E. VIII Semester

Examination, December 2020

Choice Based Grading System (CBGS)

Power System Planning and Reliability

Time : Three Hours

Maximum Marks : 70

- Note:** i) Attempt any five questions.
ii) All questions carry equal marks.

1. Describe probability distribution, random variable and distribution function regarding probability theory.
2.
 - a) Show that every Non-negative continuous memory less random variable is an exponential random variable.
 - b) Define Probability Distribution Function for two random variables.
3. Explain reliability of system with non repairable components, parallel-series configuration and non-series-parallel configuration.
4. Explain repairable system and MARKOV process.
5.
 - a) What are the various major steps involve in Operating reserve calculations?
 - b) Discuss the effect of varying load on composite system reliability.

EE-8004(2)-CBGS

PTO

[2]

6.
 - a) Explain data requirement for composite systems reliability evolution.
 - b) Discuss different Planning Tools.
7. Explain the following:
 - a) Power network reliability in terms of weather effect on transmission line.
 - b) Distribution system reliability.
8. Write a short notes on
 - a) Poison distribution
 - b) Binomial distribution
 - c) Weibull distribution
