

Total No. of Questions : 8]

[Total No. of Printed Pages : 2

Roll No

EX-701-GS

B.E. VII Semester

Examination, December 2020

Grading System (GS)

Power System - II

Time : Three Hours

Maximum Marks : 70

- Note:** i) Attempt any five questions.
ii) All questions carry equal marks.

1. a) What are the main objectives and concepts of deregulation of power system?
b) Describe organization models of power utility restructuring.
2. a) Why is load flow study necessary?
b) What is Equal Area Criteria? Explain.
3. What is meant by load flow analysis in power system networks? Discuss the classification of buses and mention the importance of buses in load flow analysis.
4. a) Derive the model of a speed governing system and represent it by block diagram.
b) Draw and explain the block diagram of load frequency control of two area system.

EX-701-GS

PTO

[2]

5. Give a flow chart for a load flow study using NR method. Show does the method get modified when PV buses are also present.
6.
 - a) What is difference between excites and voltage regulators? Explain.
 - b) Give the schematic diagram of AC static type excitation system and explain it.
7.
 - a) Derive swing equation and discuss its application in the study of power system stability.
 - b) Differentiate between steady state stability and transient stability of power system.
8. Write short notes on any two of the following:
 - a) Two area inter connected system
 - b) Methods of improving transient stability
 - c) Fast Decoupled load flow method
 - d) Distributed generation
