

Total No. of Questions : 8]

[Total No. of Printed Pages : 1

Roll No

EX-8003(2) (CBGS)
B.E. VIII Semester Examination, June 2020
Choice Based Grading System (CBGS)
Soft Computing Techniques and Applications
Time : Three Hours

Maximum Marks : 70

- Note:** i) Attempt any five questions.
ii) All questions carry equal marks.

1. a) Explain the following
 - i) Random variable
 - ii) Distribution function
 - iii) Function of random variable
 - iv) Generation of random digitalb) Explain Monte Carlo simulation and its benefits.
2. a) What are the differences between BNN and ANN?
b) What are the different activation functions used and different learning rules available?
3. Write a algorithm for back propagation training and explain about the updation of weight.
4. Write a neat sketch Explain the operation (Training and Testing) of a radial basis function neural network.
5. a) Compare Soft computing Vs Hard computing.
b) Discuss different techniques used in soft computing and their applications.
6. Discuss how genetic algorithm are used for optimization problems and explain constraint handling technique in GA.
7. a) Describe in detail of an evolutionary algorithm.
b) Explain particle swarm optimization techniques and its variants.
8. Explain the following (any two)
 - i) FLN network.
 - ii) Compare PSO and GA
 - iii) Application of ANN for load forecasting
 - iv) Application of PSO for economic load dispatch
