

Total No. of Questions : 8]

[Total No. of Printed Pages : 1

Roll No

TX-605 (GS)

B.E. VI Semester Examination, June 2020

Grading System (GS)

Yarn Manufacturing - III

Time : Three Hours

Maximum Marks : 70

Note: i) Attempt any five questions.
ii) All questions carry equal marks.

1. If a ring frame producing 40^s count has a front roller delivery rate 450"/minute. Find the production per spindle shift at 90% efficiency. If the machine has 35 0 spindles, also find the production per machine per shift and the hanks produced in a shift.
2. Explain various package faults generated in T.F.O. and how these can be corrected?
3. Explain the significance of spacer in ring spinning machine, also narrate their types.
4. What is the most weakest zone in ring spinning? What is the smallest component (movable) in ring frame? How this component gets drive?
How apron and drafting roller's rubber coating hardness affect the spinning in ring frame?
5. a) Explain angle of pull. Draw the diagram.
b) Explain the object of doubler.
6. a) Explain the supervisory check points in ring frame departments.
b) Explain the mechanism of wool spinning.
7. a) Explain wet doubling process.
b) Explain the difference between ring doubler and TFO.
8. a) Describe advance development in drafting zone.
b) Explain spinning geometry.
